WHAT IS CRI?

A Color Rendering Index (CRI) is a numerical measure of the ability of a light source to reveal the colors of various objects faithfully in comparison with an ideal or natural light source.

- The majority of LED work lights have a CRI between 75-85.
- The color temperature of natural daylight can change (morning, noon, evening), but the CRI is always 100.

2000 LUMENS OF WARM-WHITE LIGHT

OPERATING AT THE 4000K
COLOR TEMPERATURE
RANGE POPULAR AMONG
PAINTERS AND
