Plastic Refinishing

STANDARD OPERATING PROCEDURE

1 CLEAN

Clean with **SEM Soap** & a gray scuff pad. Scrub thoroughly, paying close attention to textured or recessed areas. Wipe with a clean, damp, lint-free cloth to remove all residue.

2 PREP

Apply **Plastic & Leather Prep**, **SEM Solve** or **XXX Universal Surface Cleaner**.

Wipe clean in one direction using a clean, lint-free cloth.

- ❗ **Wiping in one direction** will remove contaminants from the surface rather than smearing contaminants over the surface.
- ❗ If contamination still exists, water will bead on the surface when dry. Repeat steps 1 & 2 until beading no longer occurs.

3 DETERMINE THE CORRECT ADHESION PROMOTER

A **Sure-Coat** waterborne coating is not compatible with **Sand Free Adhesion Promoter**.

If applying **Sure-Coat** waterborne coating on ABS, do not use an adhesion promoter.

B When using **Bumper Coater** flexible coating, an adhesion promoter is not required, with the exception of **Low VOC Bumper Coater** flexible coating.

Place a drop of acetone on the back of the plastic. Rub with your gloved finger.

If the plastic smears & melts, it is ABS. Use **Sand Free Adhesion Promoter**.

Apply a medium wet coat of **Sand Free Adhesion Promoter**. See note **A**.

While still wet, apply a light coat of **Color Coat**. Avoid applying the first coat too heavily as sagging may occur.

As the **Sand Free Adhesion Promoter** evaporates, **Color Coat** flexible coating is drawn into the surface resulting in excellent adhesion.

If the acetone does not have an effect on the plastic, use **XXX Adhesion Promoter** or **Plastic Adhesion Promoter**. See note **B**.

Apply one medium wet coat of **XXX Adhesion Promoter** or **Plastic Adhesion Promoter**. Allow to flash 3 – 5 minutes before topcoating.

4 PAINT

Apply **Bumper Coater** flexible coating, **Color Coat** flexible coating, **Sure-Coat** flexible coating, **Trim Black**, or **Trim Black Ultra** trim paint.
